The Digital Juice Shoulder Mount Stabilizer is a camera support worn over the shoulder and featuring 2-point stabilization through the back and chest. The lightweight unit weighs less than 2 lbs, making it very easy to use, hold and carry in your production kit. This is an invaluable tool when working on location in large crowds, or when the camera has to be in constant motion, preventing your handheld camera from falling, while still providing a lightweight stable foundation for your shots. No matter where you are shooting, you will get smoother looking video and reduce your muscle fatigue when using this stabilizer.

Our lightweight Shoulder Mount Stabilizer has a spring-loaded, locking pivot point with high density foam-lined shoulder and chest pads for an easily adjustable and comfortable fit on the body. The unit distributes the weight of the gear mounted to it onto the back and chest, relieving stress on the shoulders and arms and leaving the hands free to work controls.

### Getting Started Guide

**What’s Included:**
- 1 Shoulder Mount Stabilizer unit (1) with built-in industry-standard 1/4-20 camera mount plate and adjustable spring loaded pivot point (2)
- 1 1.5” Safety Strap (3)—clips onto the unit and across the body for further safety and stability when in use
- 2 adjustable accessory base plates—allow a wide variety of camera sizes to be accommodated
  - 1 large adjustable base plate extends from the unit with a rectangular rubber-padded base (4)
  - 1 small adjustable base plate—attaches either directly to the unit or to the large base plate accessory and has a rubber-padded quick release base on top of a riser which raises the position of the camera by 2.5” (5)
- 1 soft, drawstring carry bag (6)—provided to keep the unit and its parts clean and safe while on the go

### Using the Shoulder Mount Stabilizer

Large and small camera mount extension plates allow a wide variety of camera shapes and sizes to be accommodated and adjusted so that eyepiece and viewscreen are positioned correctly (7, 8). The unit’s industry-standard 1/4-20 mounts (9) will accept a wide variety of cameras and accessories.
Using the Shoulder Mount Stabilizer (continued)

The smaller mounting plate extension unit includes a quick release plate for quick and easy camera placement and removal (10). The larger extension plate (11) has a rectangular rubber-padded base to support larger cameras.

Both accessory plates can be adjusted back and forth (12) or angled to the side (13) to ensure an optimal viewing/shooting position for your camera via easy-grip, sliding, lock-down screw knobs (14).

You can use the Shoulder Mount Stabilizer with just the main unit’s mounting plate (15), with either the small (16) or large (17) mounting plate attached, or with both extension plates attached (18), depending on your camera setup and needs.

The 1.5” Safety Strap provided with the Shoulder Mount Stabilizer clips to the unit (19) and across the body for added security and stability (20). It can be easily attached/detached using the quick-attach side squeeze buckle (21) and sized for any body by adjusting the length of the web strap (22).

CAUTION

The Shoulder Mount Stabilizer is not designed for hands-free operation. The Safety Strap should be attached to the Shoulder Mount Stabilizer, and the strap secured around the operator, as specified in the product instructions above. The Safety Strap is a safety device designed to prevent users from inadvertently dropping their camera-attached Shoulder Mount Stabilizer. The Safety Strap is NOT designed as a standalone or load-bearing apparatus.

Specifications

Dimensions: Approx. 14.75” x 9”/375mm x 229mm (at most compact, with both base plates attached); 14.75” x 5.75” / 375mm x 146mm (at most compact, without both base plate accessories)
