Cautions &
Warnings

• The Slyder Power Unit device can handle horizontal dolly moves on your Slyder Dolly with camera setups up to 25 lbs, and angled shots up to 28 degrees with a 3-lb camera setup. For best results, and to avoid damage to your camera and equipment, do not exceed these limits.

• When using the Slyder Power Unit device on an angled Slyder Dolly, remember to adjust the angle of your camera on the attached ball head so that it shoots straight.

• Before setting your Slyder Dolly up at an angle, it is best to move the camera-attached trolley to the fixed end of the Slyder and then secure the brake. This will help avoid damaging the camera when you raise the opposite end of the Slyder to the desired angle.

• Avoid direct exposure to rain, water or sand as the device is not waterproof, and getting dirt or sand on it could interfere with the smooth operation of the unit.

• If you plan to store your Slyder Power Unit for an extended period of time, remove the batteries from the Power Control Unit, and keep it in a dry or low humidity area.

• Do not use solvents or harsh cleaners of any kind on the Slyder Power Unit components. If they become dirty, use only a damp cloth or sponge with water to gently rub clean.
